

CORE COMPETENCIES

01

Cloud Architecture & Migration

Azure landing zones, built to scale.

03

Cloud FinOps & Cost Optimization

Spend that maps to what you actually use.

02

DevSecOps & Automation

Security built into the pipeline, not bolted on after.

04

IT Training & Curriculum Development

Teams that can run what we help you build.

DIFFERENTIATORS

Senior from day one. No account layers, no handoffs — the engineer who scopes the work delivers it.

Infrastructure as code, always. Everything we build is versioned, repeatable, and documented. You own the code and can run it without us.

Teach as we go. Every engagement transfers knowledge — runbooks, walkthroughs, and training so your team operates what we build.

PRINCIPAL EXPERIENCE

- Tenant-to-tenant migration of 150+ applications for a national distributor — secure landing zones, dependency mapping, zero-loss cutover
- 80% Azure SQL cost reduction via serverless migration in a FinOps engagement
- AKS platform builds, Zero Trust baselines, and compliance-aligned IaC across HIPAA, GDPR, and PCI-DSS environments
- 34 production-context hands-on labs authored for Azure Data Factory training
